Nasir is the Prince of Death, assassinating those foolish enough to defy his autocratic father, the sultan. If Zafira was exposed as a girl, all of her achievements would be rejected; if Nasir displayed his compassion, his father would punish him in the most brutal of ways. Both Zafira and Nasir are legends in the kingdom of Arawiya—but neither wants to be. War is brewing, and the Arz sweeps closer with each passing day, engulfing the land in shadow. When Zafira embarks on a quest to uncover a lost artifact that can restore magic to her suffering world and stop the Arz, Nasir is sent by the sultan on a similar mission: retrieve the artifact and kill the Hunter. But an ancient evil stirs as their journey unfolds—and the prize they seek may pose a threat greater than either can imagine.

Chapter 1 focuses on professional issues in nephrology nursing and is a new addition to the Core Curriculum. The first chapter places emphasis on nursing leadership and management. All nephrology nurses are managers and leaders, whether or not they maintain a management position. All will face ethical dilemmas; all will be involved in providing a safe clinical environment; all will take part in assessing quality care; and all are expected to perform as a professional with an understanding of what that entails. Chapter 2 concentrates on research and evidence-based practice and what it means to nephrology nurses. It offers information on sites where valuable statistics and further information can be obtained. Chapter 3 explains the political process and the importance for all of us to get involved. It is not as difficult as one might think. Chapter 4 motivates the reader to prepare for emergencies. As too many of us know, emergencies and disasters do happen, and having plans in place prior to the event can help lessen the residual impact.

**How to Make Girls Chase**

"Remarkable. . . should have strong, immediate interest for the ecologists engaged in efforts to restore the Everglades."--William B. Robertson, research biologist for Everglades National Park From the book-- Pa built our house out of rough lumber that they got from Frazier's sawmill . . . a one-room house about 16 to 18 feet long and 12 feet wide. We all slept on cots and sat on boxes or a trunk. The kitchen was in the corner, and Ma cooked on a four-hole stove, which cost six dollars. Me and my middle brother, Alvin, sat on a trunk to eat at the table. That trunk had some long cracks in it. My brother knew just how to move so the crack would pinch . . . . Years before the Park was established, when all the land and marsh seemed to belong to me, we would help ourselves to whatever we could see or trade for survival. Mostly we would sell gator and otter hides. . . . On this particular trip, after grunting awhile at the gator hole, I gave up and made tracks to the camp since I wanted to return by dark. . . . I was lying under my skeeter bar with a small tarp stretched between two cabbage palms. About midnight, I heard the dried cabbage fronds breaking in the path toward my camp. The night was pitch black . . . Few people today can claim a living memory of Florida's frontier Everglades. Glen Simmons, who has hunted alligators, camped on hammock-covered islands, and poled his skiff through the mangrove swamps of the glades since the 1920s, is one who can. Together with Laura Ogden, he tells the story of backcountry life in the southern Everglades from his youth until the
establishment of the Everglades National Park in 1947. During the economic bust of the late '20s, when many natives turned to the land to survive, Simmons began accompanying older local men into Everglades backcountry, the inhospitable prairie of soft muck and mosquitoes, of outlaws and moonshiners, that rings the southern part of the state. As Simmons recalls life in this community with humor and nostalgia, he also documents the forgotten lifestyles of south Florida gladesmen. By necessity, they understood the natural features of the Everglades ecosystem. They observed the seasonal fluctuations of wildlife, fire, and water levels. Their knowledge of the mostly unmapped labyrinth of grassy water enabled them to serve as guides for visiting naturalists and scientists. Simmons reconstructs this world, providing not only fascinating stories of individual personalities, places, and events, but an account that is accurate, both scientifically and historically, of one of the least known and longest surviving portions of the American frontier. Glen Simmons has lived in the south Florida Everglades since his birth in 1916 in Homestead. In 1995 he was awarded a State of Florida Heritage Award for his unique contribution to Florida's history and folk culture. He has demonstrated and taught glades skiff building for the Florida Department of State, Bureau of Folklife, and the South Florida Historical Society; his boats are on permanent display at the Florida Folklife Museum in White Springs, Florida, and at the Historical Museum of Southern Florida, Miami. Laura Ogden, also born in Homestead and a life-long friend of Glen Simmons, is assistant professor of anthropology at Florida International University.

The Whisper

Topological insulators are insulating in the bulk, but process metallic states present around its boundary owing to the topological origin of the band structure. The metallic edge or surface states are immune to weak disorder or impurities, and robust against the deformation of the system geometry. This book, the first of its kind on topological insulators, presents a unified description of topological insulators from one to three dimensions based on the modified Dirac equation. A series of solutions of the bound states near the boundary are derived, and the existing conditions of these solutions are described. Topological invariants and their applications to a variety of systems from one-dimensional polyacetalene, to two-dimensional quantum spin Hall effect and p-wave superconductors, and three-dimensional topological insulators and superconductors or superfluids are introduced, helping readers to better understand this fascinating new field. This book is intended for researchers and graduate students working in the field of topological insulators and related areas. Shun-Qing Shen is a Professor at the Department of Physics, the University of Hong Kong, China.

EMBRACING DEATH examines common mythologies and misconceptions about death, and provides a roadmap to alternative perceptions via meditation, visualization and after-death communication. Using these innate, intuitive tools, Daniel leads her audience to new ways of
understanding death, and offers innovative strategies for navigating the dying and grieving process. Her inspiring, heart-opening vision of birth, death and the afterlife gently guides the reader into the higher realms, where death is experienced as neither an enemy nor an ending, but simply the continuation of life in another form. She begins this journey by exploring the fear-based beliefs about death that are the cornerstone of Judeo-Christian thinking, and then submits a compassionate array of more empowering, less frightening alternatives. As a channeler, Daniel looks at death from the perspective of the dead and dying.

**Memories of the Afterlife**

The United States has the highest per capita spending on health care of any industrialized nation but continually lags behind other nations in health care outcomes including life expectancy and infant mortality. National health expenditures are projected to exceed $2.5 trillion in 2009. Given healthcare's direct impact on the economy, there is a critical need to control health care spending. According to The Health Imperative: Lowering Costs and Improving Outcomes, the costs of health care have strained the federal budget, and negatively affected state governments, the private sector and individuals. Healthcare expenditures have restricted the ability of state and local governments to fund other priorities and have contributed to slowing growth in wages and jobs in the private sector. Moreover, the number of uninsured has risen from 45.7 million in 2007 to 46.3 million in 2008. The Health Imperative: Lowering Costs and Improving Outcomes identifies a number of factors driving expenditure growth including scientific uncertainty, perverse economic and practice incentives, system fragmentation, lack of patient involvement, and under-investment in population health. Experts discussed key levers for catalyzing transformation of the delivery system. A few included streamlined health insurance regulation, administrative simplification and clarification and quality and consistency in treatment. The book is an excellent guide for policymakers at all levels of government, as well as private sector healthcare workers.

Approximately 4 million U.S. service members took part in the wars in Afghanistan and Iraq. Shortly after troops started returning from their deployments, some active-duty service members and veterans began experiencing mental health problems. Given the stressors associated with war, it is not surprising that some service members developed such mental health conditions as posttraumatic stress disorder, depression, and substance use disorder. Subsequent epidemiologic studies conducted on military and veteran populations that served in the operations in Afghanistan and Iraq provided scientific evidence that those who fought were in fact being diagnosed with mental illnesses and experiencing mental health-related outcomes in particular, suicide at a higher rate than the general population. This report provides a comprehensive assessment of the quality, capacity, and access to mental health care services for veterans who served in the Armed Forces in Operation Enduring Freedom/Operation Iraqi Freedom/Operation New Dawn. It includes an analysis of not only the quality and capacity of mental health care services within the Department of Veterans Affairs, but also barriers faced by patients in utilizing those services.
