This book examines and analyzes issues related to public finance in subnational governments, along with a discussion of case studies on decentralization. Most of the analysis applies to all public goods and services provided by subnational governments, with some placed on the role of subnational governments in the management of environmental resources, notably water and waste. Coverage includes optimal arrangements for sharing fiscal responsibilities among different levels of government, the potential impact of decentralization on the quality of public goods delivery, local governments’ expenditure and revenue choices, and the effect of decentralization on accountability, governance and policy outcomes. The scope of discussion extends to both public finance theory and applied policy debates. The first chapter, on trends in financing of public services, opens with an explanation of the how and why of government intervention in the economy, the nature and purposes of transfers between and among governments and trends in decentralization. Case studies examine the impact of decentralization in such areas as service delivery, water and sanitation, education and health, and on poverty and income inequality. Chapter 2 examines public budgets: governance structures, norms and organizational practices, building up understanding of budgets, budget cycles, fiscal revenues from fees and taxes, expenses, debt and political economy issues, rules mandating balanced budgets in government and more. Chapter 3 discusses issues of accountability and policy outcomes, offering important lessons from recent international experience, including ways to strengthen political, administrative and financial accountability. The concluding chapter recounts lessons from recent international experience and surveys implications for the nexus approach to management of environmental resources. The information, analysis and expert advice presented here is particularly relevant for developing
and emerging countries, where well designed decentralization reforms have a higher potential to improve efficiency in the provision of public services, and to enhance the development of integrated and sustainable strategies for the use of water, soil and waste resources and applications that advance the nexus approach. This state-of-the-art reference collection addresses the major themes, theories and key concepts related to higher education policy and governance on an international scale in one accessible volume. Mapping the field and showcasing current research and theorizations from diverse perspectives and authoritative scholars, this essential guide will assist readers in navigating the myriad concepts and themes involved in higher education policy and governance research and practice. Split into two sections, the first explores a range of policy concepts, theories and methods including governance models, policy instruments, institutionalism and organizational change, new public management and multi-level governance. The second section addresses salient themes such as institutional governance, funding, quality, employability, accountability, university rankings, widening participation, gender, inequalities, technology, student involvement and the role of higher education in society. Global in its perspective and definitive in content, this one-stop volume will be an indispensable reference resource for a wide range of academics, students and researchers in the fields of education, education policy, sociology, social and public policy, political science and for leadership. Contributed articles; with reference to India. This book contains a study of the economics and management of public enterprises in Pakistan. It examines their performance, organizational behavior, relationships with other government organizations outside of the sector, and the issues that confront the public enterprise sector and the government. Autonomy, Accountability and Social Justice provides an account of
recent developments in English state education, with a particular focus on the ‘academisation’ of schooling. It examines how head teachers, teachers and others working in diverse education settings navigate the current policy environment. The authors provide readers with insight into the complex decision-making processes that shape school responses to current educational agendas and examine the social justice implications of these responses. The book draws on Nancy Fraser’s social justice framework and her theorising of neoliberalism to explore current tensions associated with moves towards both greater autonomy for and accountability of state schooling. These tensions are presented through four case studies that centre upon 1) a group of local authority primary schools, 2) an academy ‘chain’, 3) a co-operative secondary school and 4) an alternative education setting. The book identifies the ‘emancipatory’ possibilities of these approaches amid the complex demands of autonomy and accountability seizing English schools. Informed by a consideration of market parameters and social protectionist ideals, this examination provides rich insights into how English schools have emancipatory capacity. Autonomy, Accountability and Social Justice makes a major theoretical contribution to understandings of how the market is working alongside the regulation of schooling and the implications of this for social justice. By drawing on the experiences of those working in schools, it demonstrates that the tensions associated with autonomy and accountability within the current education policy environment can be both productive and unproductive for social justice. This insightful book discusses the impact of EU law on the creation and empowerment of autonomous public bodies (APBs) at Member State level and analyzes recent attempts of European states to rationalize delegation to APBs. It examines the tensions between these trends: under what conditions can APBs be considered legitimate forms of government in the
light of modern conceptions of constitutionalism, the rule of law and democracy - values that are deeply rooted in European constitutions? And to what extent do EU obligations on the independence of national regulators, data protection authorities and the like conflict with those conceptions? Contributed articles; in the Indian context. Political accountability forms a cornerstone of modern democracy: it directs the political system towards the public interest and allows the exercise of the principles of autonomy and self-determination that lie at the core of democratic politics. Sadly, existing democracies, with their large, centralized bureaucracies, have evolved in ways that progressively undermine the ability of citizens to keep their representatives accountable and political regimes responsive. Far from reversing this trend, the neoliberal reforms introduced since the 1980s have increased that accountability gap. Globalization and the alleged passage from 'government' to 'governance' have aggravated the problem further. The notion of accountability that survives these changes is a problematic form of auditing carried out by a constellation of quangos, autonomous agencies and NGOs whose own accountability is problematic. This volume collects the main contributions to current debates on political accountability. It explores the challenges traditional conventions of accountability face today at the domestic, trans- and international levels and indicates the distinctive solutions those challenges require. Uses the tools of modern time series analysis to determine the role of an aggregate demand for real balances in the generation of macroeconomic time series. Undertakes the identification and estimation of the demand function in a multivariate, rather than the usual single-equation, framework. Discusses the development and failures of the empirical literature; identification, estimation, and inference; a framework for structural and dynamic analysis; a prototype economic model characterized by
co-integration; three-variable and higher dimensional VECM models; and combining term structure and Fisher effects. Annotation copyright by Book News, Inc., Portland, OR Vital Notes on Accountability is a concise, accessible guide which provides students and newly qualified staff with an understanding of key issues in professional practice. Nurses are accountable for their own practice and require a thorough understanding of their core responsibilities which underpin everyday practice in the health service today. This introductory text in the ‘Vital Notes for Nurses’ series sets out a framework for accountability which consists of four ‘pillars’ - legal, ethical, employment and professional accountability - against which clinical issues can be considered. * Presents legal, ethical, employment and professional issues in an accessible way * Explores accountability, professional regulation, sources of funding and treatment in the health service * Examines complaints, human rights, negligence, consent, and confidentiality * Explores further applications in accountability * Each chapter includes learning objectives, scenarios and case studies Contributed papers A PDF version of this book is available for free in open access via the OAPEN Library platform, www.oapen.org. This book presents a new model of accountability which ensures that public-private partnerships don't erode public accountability. It defines concrete accountability standards for different types of partnerships. International Organizations and the Idea of Autonomy is an exploratory text looking at the idea of intergovernmental organizations as autonomous international actors. In the context of concerns over the accountability of powerful international actors exercising increasing levels of legal and political authority, in areas as diverse as education, health, financial markets and international security, the book comes at a crucial time. Including contributions from leading scholars in the fields of international law, politics and governance, it
addresses themes of institutional autonomy in international law and governance from a range of theoretical and subject-specific contexts. The collection looks internally at aspects of the institutional law of international organizations and the workings of specific regimes and institutions, as well as externally at the proliferation of autonomous organizations in the international legal order as a whole. Although primarily a legal text, the book takes a broad, thematic and inter-disciplinary approach. In this respect, International Organizations and the Idea of Autonomy offers an excellent resource for both practitioners and students undertaking courses of advanced study in international law, the law of international organizations, global governance, as well as aspects of international relations and organization. This technical note focuses on the concept of autonomy and describes why it is important in public administration. There has been a tendency for governments to increase the autonomy of their departments and agencies. The basic principle is that such autonomy can lead to better performance by removing impediments to effective and efficient management while maintaining appropriate accountability and transparency. This note explains how autonomy is relevant for revenue administration and what is the range of autonomy currently practiced. The paper also describes key measures of autonomy in revenue administration. This book focuses on regulatory reforms and the autonomization and agencification of public sector organizations across Europe, Canada, New Zealand and Australia. The central argument of the book is that regulation and agencification occur and perform in tandem. Comparative analysis on the processes, effects and implications of regulatory reform and the establishment of semi-independent agencies are undertaken, and the practice of trade-offs between political control and agency autonomy is explored. The contributors also discuss the challenges of
fragmentation, coordination, 'joined-up' government and other government initiatives in the aftermath of the New Public Management movement and its focus on agencification. Finally, the complexity of deregulation/re-regulation, new emergent forms of regulation, control and auditing as well as reassertion of the centre are examined. Until now, there has been little attempt to link the study on regulation and regulatory reforms with that of autonomous central agencies. In this book the two fields are brought together. Autonomy and Regulation will find its audience amongst scholars and researchers working in the areas of political science, public administration and public management, organization theory, institutional analyses and comparative administration. It will also appeal to scholars and those directly involved in public sector and regulatory reforms including politicians and managers.
