A provocative, scientific solution to one of every teacher's biggest problems Why is it so hard to get students to pay attention? Conventional wisdom blames iPhones, insisting that access to technology has ruined students' ability to focus. The logical response is to ban electronics in class. But acclaimed educator James M. Lang argues that this solution obscures a deeper problem: how we teach is often at odds with how students learn. Classrooms are designed to force students into long periods of intense focus, but emerging science reveals that the brain is wired for multitasking. 

University president Joseph Aoun proposes a way to educate the next generation of college students to invent, to create, and to discover—to fill needs that even the most sophisticated smart machines cannot fulfill. 

Aoun lays out the framework for a new discipline, humanics, which builds on our innate strengths and prepares students to compete in a labor market in which smart machines work alongside human professionals. The new literacies of Aoun's humanics are data literacy, technological literacy, and an understanding that the ability to invent, create, and discover is prerequisite to success in the 21st century economy. 

Aoun argues that the role of immigration in college demand.

The design of information literacy instruction and the building of it are two distinct skillsets and processes; yet all too often everything gets conflated. The creation of a learning community and the development of the necessary support structures to enable student success are core goals of institutions of higher education. 

It often seems that there is more confusion than consensus regarding tourism theory. Does tourism have theories it can truly own, or does it just borrow from other academic disciplines? It can be difficult to understand the theories and conceptual frameworks available, and how to apply them in a practical context. 

This book reviews theoretical perspectives on tourism from planning and management, through marketing and product development, to economics and law. It offers a framework for more rigorous tourism research and highlights the need for more theoretical work in the field. 

Amer and colleagues test a structural equation model (SEM) of four tourism demand determinants: demographics, human capital, income, and intrapersonal psychological factors. They use SEM to confirm and extend previous research on tourism demand, suggesting that tourism research should incorporate an interdisciplinary perspective to develop more rigorous theories and models. 

The authors argue that tourism theory should be developed in collaboration with tourism practice to ensure that it is relevant and useful to practitioners. They conclude by calling for more interdisciplinary research and education to prepare the next generation of tourism scholars.

How our colleges and universities can respond to the changing hopes and needs of society
In recent decades, cognitive psychologists have cast new light on human development and given colleges new possibilities for helping students acquire skills and qualities that will enhance their lives and increase their contributions to society. In this landmark book, Derek Bok explores how colleges can reap the benefits of these discoveries and create a more robust undergraduate curriculum for the twenty-first century.

Prior to this century, most psychologists thought that creativity, empathy, resilience, conscientiousness, and most personality traits were largely fixed by early childhood. What researchers have now discovered is that virtually all of these qualities continue to change through early adulthood and often well beyond. Such findings suggest that educators may be able to do much more than was previously thought possible to teach students to develop these important characteristics and thereby enable them to flourish in later life.

How prepared are educators to cultivate these qualities of mind and behavior? What do they need to learn to capitalize on the possibilities? Will college faculties embrace these opportunities and make the necessary changes in their curricula and teaching methods? What can be done to hasten the process of innovation and application? In providing answers to these questions, Bok identifies the hurdles to institutional change, proposes sensible reforms, and demonstrates how our colleges can help students lead more successful, productive, and meaningful lives.
